

MOBILEFRAME[®]

Configurable Mobile Applications[™]

The Only Complete Mobile Enterprise Application Platform

Hassle-free Cross-Platform Compatibility

Write Once. Deploy Anywhere.

A Single Platform that Works on Any Device

MobileFrame's complete enterprise mobility solution allows organizations to easily create, deploy and administer robust native and HTML 5 web applications that work on any device with no custom programming required. Our Smart Architecture™ and intuitive system eliminates time-consuming and expensive custom coding projects. With our platform, an app written one time will perform consistently across all devices in your organization from smartphones (iPhone, Android, etc) to laptops and tablets (iPad, Android & Windows 8 devices).

Key Benefits of Going Mobile with MobileFrame

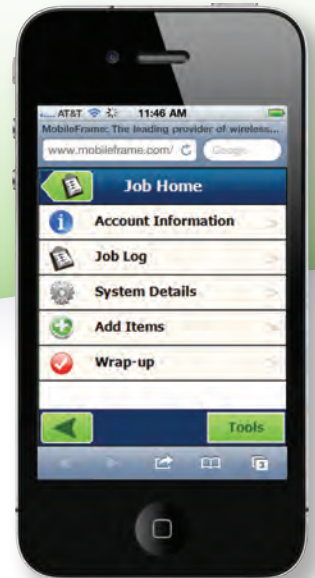

Fortune 100 companies, government agencies and small businesses rely on MobileFrame every day to boost productivity while reducing costs. Some benefits of our mobile solution include:

A Complete Solution: No need to buy a variety of third party software for sync, security, data and device management. Everything you need to create, manage and deploy apps is built-in.

Cross Platform: Write once, deploy anywhere. Build your apps once and they'll work on any device, including everything from mobile devices to desktops.

Maximize Productivity: Automate costly manual processes and decrease paperwork so your workforce can get more done.

Real-time Data Access: Provide the right data to the right person at the right time. Whether it's your employees, customers or suppliers, everyone will have the information they need at their fingertips.

No Custom Coding Problems: Time consuming, expensive and difficult to maintain coding efforts are a thing of the past. With MobileFrame you can develop, modify and manage apps in a fraction of the time.

Easily Integrate to Backend Systems: With most mobility projects, integration is a huge hassle and common point of failure. Hard-coded solutions & other platform vendors require complex coding efforts to integrate apps to backend systems. With our Integration Wizard, your integrations will be up and running in a fraction of the time.

Build Apps to Meet Any Requirement

Write your own custom apps or use one of our ready-to-run solutions.

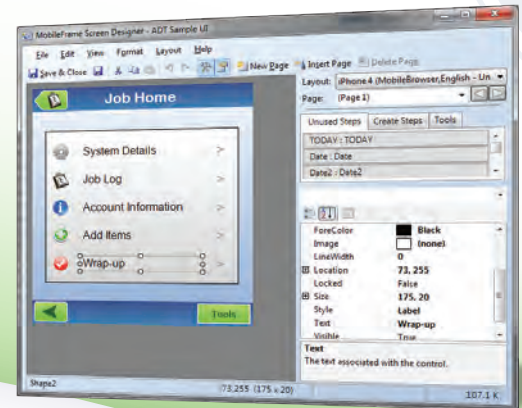

MobileFrame is a Complete Enterprise Mobility Solution

A successful mobility project requires more than just applications - it requires tools for development, deployment, management and maintenance. We provide everything your business needs to ensure your projects run smoothly and drive high returns. Our robust administration tools include mobile device management, instant messaging, GPS tracking, prioritized synchronization, and much more...

Easy-to-use Rapid Development Tools

MobileFrame is the industry leader in mobile app development because it allows enterprises to easily create custom tailored apps for any department and for any requirement. Anyone from business managers to IT pros can create and modify apps, with no programming knowledge required. Our platform includes globalization support, version control, automatic documentation, a built-in test environment and more.

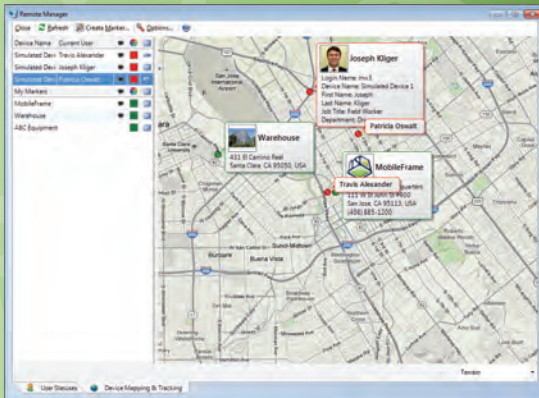

Enterprise-class Data Management

It's not enough to just collect data from the field, you need to use it. MobileFrame supports anything from simple systems with minimal data to sophisticated systems with millions of records on each device. Enterprise-class data management is built directly into the MobileFrame platform, including the ability to:

- Provide real-time data for employees and customers via mobile apps & web portals
- Integrate to and from backend systems
- Print reports and receipts in the field
- Generate PDF's and automatically email them
- and much more

Mobile Device Management (MDM)

Managing your users and their devices is critical. Our platform includes all the MDM features your organization needs, including: remote device control, GPS tracking, secure instant messaging, over-the-air automatic updates, device health monitoring, user and device auditing, etc.

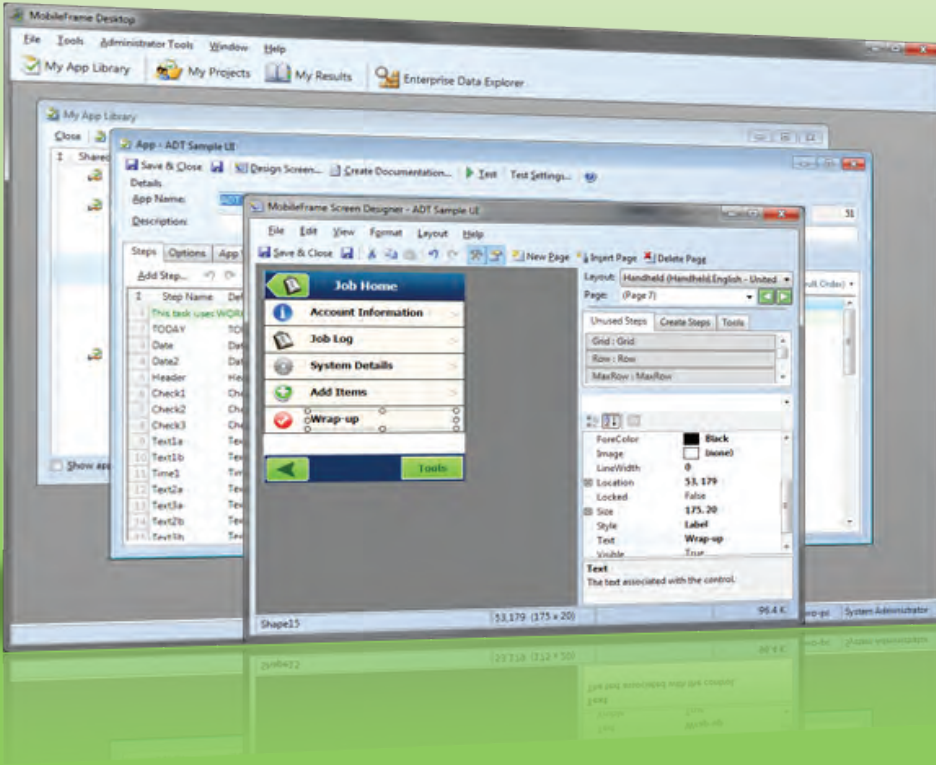

Worry Free Sync, Security and Authentication

You'll never lose a byte of data with our worry free system. The software is Sarbanes-Oxley-compliant and includes intelligent synchronization, Active Directory authentication, and military-grade security and encryption (FIPS compliant encryption, invisible 2-factor authentication, remote data wiping, etc).

Application Features

- Operates with or without connectivity
- Over-the-air updates
- Automatic globalization
- Point and click logic creation
- Instant messaging and alerts
- GPS tracking and mapping
- Customizable per-user permissions
- and much more...
- RFID reading and writing
- Barcode scanning
- Gesture support
- Photograph capture and annotation
- Fingerprint scanning
- Digital signatures
- Voice recording and audio instructions

System Features

Enterprise-class: The MobileFrame platform is Sarbanes-Oxley and HIPAA-compliant and includes Active Directory support, end-to-end security and encryption, context-sensitive online help, granular control of data distribution, and automatic version control. The platform is also extensible with support for re-use of custom code.

User Configurable: Business administrators who manage mobile activities can easily create, deploy & manage mobile projects using an intuitive GUI based application.

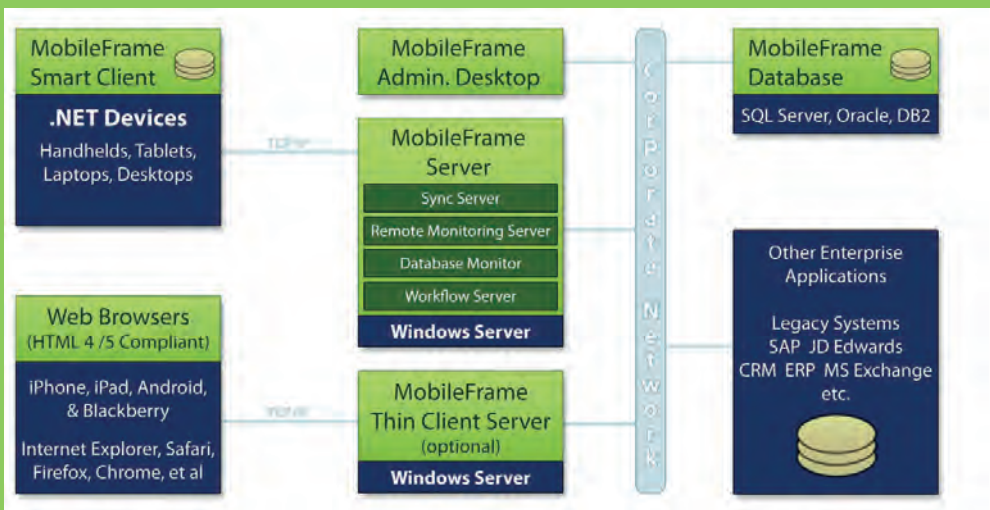

Ubiquitous: Your apps can be made available to any user, on any device.

Connection Management: The Smart Client queues transactions until connectivity is available; the Thin Client retains a user's data even if they lose connectivity, preventing data loss so they can pick up right where they left off when connectivity returns.

Enterprise Integration: Our Integration Wizard makes establishing secure and controlled bi-directional data exchange with any backend systems a breeze.

Industry Standards: Designed to comply with key standards, leveraging existing and planned investments and enabling a growth path to future functionality.

Components

System Requirements

Server Platform

Microsoft Windows Server 2000/2003/2008, SQL Server 2000 or later. (IIS Required)

Handheld Clients

Any Microsoft .NET compatible device, iPhones/iPads/Android devices, any HTML 4/5 compliant mobile browser

Desktop Clients

Windows 2000 Pro, XP, or Vista, Windows 7; Any HTML 4/5 compliant browser.

Networking

Any TCP/IP connection including wireless 802.3 or 802.11; LAN; EVDO/CDMA, CDPD, GSM/GPRS, or iDEN WAN; or 56k modem.
